

What makes a performance fabric a performance fabric?

Many textile suppliers are touting the ‘performance’ of their products, but have you considered what makes a fabric a **performance textile**?

It is more than just a branded finish – this will certainly add cost to the material, and if applied to an inferior fabric it won’t do much in the way of increasing longevity.

It is more than just a branded yarn – this can improve a singular performance attribute such as fade resistance, but does not make for improved all-around durability.

Performance textiles are the result of the proper combination of fiber, yarn structure, fabric construction, and finishing.

WE HAVE PERFORMANCE IN OUR DNA

· Our fabrics are designed to wear longer. Every Nassimi fabric exceeds 100,000 double rubs abrasion resistance.

· Our products are easy on the eyes, a delight to touch, but tough where they need to be – with superior seam slippage far exceeding contract textile standards.

· Nassimi textiles maintain their youthful appearance, even as they age gracefully. Every fabric is tested for pilling resistance, with exceptional results.

· All Nassimi Textiles come standard with stain repellant that is applied by submerging in a bath. Our fabrics look pretty, not just in a showroom, but in a home, a hotel room, an office, or a restaurant.

Our performance fabrics are designed to be timeless, and to withstand the test of time.

ALWAYS IN STOCK. ALWAYS HIGH PERFORMANCE.
