

CLEANING & DISINFECTION GUIDE FOR SiO THE MEDICAL PERFORMANCE GRADE SILICONE

SiO™

The medical performance grade silicone™

Flame Resistant, anti-microbial/bacterial without added chemicals

Inherently ink and stain resistant

Surprisingly soft and supple

TEST PERFORMED:

Test Performed: Stain Resistance CFFA 141-2012 / Standard Test Method for Effect of Household Chemicals on Clear and Pigmented Organic Finishes ASTM D1308-02(2013)

A coated fabric's ability to resist specific cleaners and disinfectants is an important part of the product's performance. SiO medical performance grade silicones were tested using the rigorous protocol developed by coated fabric manufacturers and distributors in conjunction with the Association for Contract Textiles. This particular test is to evaluate the impact of cleaners and disinfectants on coated fabrics.

Test Method: The cleaner or disinfectant at the recommended dilution is placed on a sample of the coated fabric for one day. After the chemical or disinfectant has evaporated completely, these steps are repeated over a five-day period for a total of five cycles. After the 5th cycle any chemical residue is wiped off using fresh water and the specimen is visually evaluated to the control sample for any visual changes.

DISCLAIMER

The test method is to evaluate the material's relative resistance or compatibility to specific cleaners and/or disinfectant chemistries and is not an approval or recommendation of said cleaners and/or disinfectants.
 This test method is not intended to replicate a 'real world' scenario as there is no way to predict use (or misuse) of cleaners and/or disinfectants within an environment.

KEY	DEFINITION
NO EFFECT	NO CHANGE IN COLOR OR SURFACE FINISH
SLIGHT EFFECT	A CHANGE IN COLOR OR SURFACE FINISH ONLY VISIBLE AT CERTAIN ANGLES
MODERATE EFFECT	A CHANGE IN COLOR OR SURFACE FINISH VISIBLE FROM ALL ANGLES AND DIRECTIONS
SEVERE EFFECT	A CHANGE IN COLOR OR SURFACE FINISH, WHICH OBVIOUSLY AND MARKEDLY ALTERS THE ORIGINAL CONDITION OF THE SPECIMEN

Prompt cleaning is always recommended. Please follow the cleaning guide by type of stain.

REGULAR CLEANING AND MAINTENANCE

Clean the soiled area with mild soap and water, then rinse with fresh water and wipe dry with a clean cloth.

EXAMPLE

Dirt
Dust
Grime

FOOD STAINS / OILS

Wipe affected area with a soft cloth with appropriate pressure. If some stain persists, clean with mild soap and water. Rinse with fresh water and wipe dry. For stubborn stains spot clean with a 70% dilution of isopropyl alcohol and water and wipe. Rinse with fresh water and wipe dry.

Ketchup
Chocolate
Coffee
Tea

INK MARKS/GRAFFITI

Rub the affected area with a dry soft cloth with firm pressure. If some stain is still present spray it with a 70% dilution of isopropyl alcohol and water and wipe. Rinse with fresh water and wipe. Note: Removal of ink, particularly permanent marker, may vary depending on the period of time that the ink sets in. While this material offers excellent protection, full removal is not guaranteed.

Ball Point Pen
Permanent Marker

DENIM DYE TRANSFER

This material is designed to withstand the transfer of most types of indigo dye. In the case that faint dye transfer is visible, this can typically be removed with a 70% dilution of isopropyl alcohol and water. Note: Removal of indigo dye, particularly from wet jeans, may vary depending on the type of denim. While this material offers excellent protection, full removal is not guaranteed.

Blue Jeans

HEALTHCARE

Wipe the affected area with a soft cloth with appropriate pressure. If some stain persists, spray it with a 70% dilution of isopropyl alcohol and water and wipe. Rinse with fresh water and wipe.

EXAMPLE

Blood

Urine

Betadine

DISINFECTION

To disinfect apply a 20% solution of Household Bleach and water or a 70% solution of Isopropyl Alcohol and water. After the appropriate contact time, wipe surface dry and gently wipe or rinse with fresh water.
